

Board & Batten

Wall Panel

A timeless look with quality Central States metal.

Metal Board & Batten siding is a contemporary and durable exterior cladding option that adds a touch of modern sophistication to residential and commercial buildings alike. This siding style combines the robustness of metal materials with the timeless appeal of the Board & Batten design, giving a lifetime of beauty at a price that's comparable to wooden panel installation, but without the need for ongoing maintenance found in perishable wooden or vinyl siding.

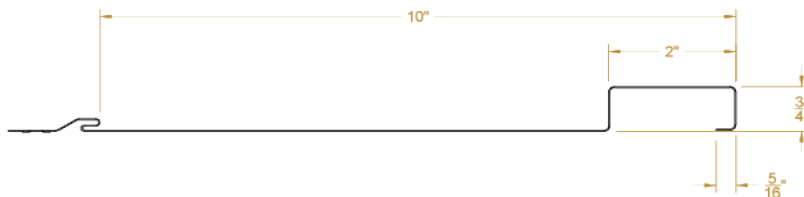

- Board & Batten involves alternating wide boards (metal panels) with narrow, thin strips of metal (the battens) that are placed over the seams where the two pieces meet.
- This style was historically used on barns and farmhouses, and is now popular in both residential and commercial construction.
- Central States steel is up to 80% recycled content and as the most recycled material on the planet, the choice to install steel rather than vinyl is environmentally responsible.

Central States SMP and NEW Woodgrain panels provide a classic look with long-lasting protection for your home.

This new product line launches with all necessary trim, insulation, fasteners, and installation guides needed to complete a beautiful installation. Standard panels size includes 10" coverage, with additional custom options ranging from 10"-25 1/4" available upon request to fit a variety of different architectural styles.
